Introtek International Launches the Point Level Detection Sensor.

Edgewood, New York — **Introtek International**, a global leader in air and liquid detection has announced the launch of their **Point Level Detection Sensor**. The **Point Level Detection Sensor, "PLD"**, was developed in order to meet the growing needs for a reliable and accurate method for *non-invasive* detection of liquid levels in plastic containers. The sensor employs a unique simple attachment means that eliminates the needs for adhesives, tapes and gels. The device is designed to withstand the rigorous and demanding usage often found in labs and clinics as well as processing and manufacturing environments. A sleek industrial design package provides a compact and cost effective solution for a wide range of applications.

Introtek International has been custom-designing and manufacturing *non-invasive* ultrasonic sensors since 1982, and has been a wholly owned subsidiary of Magnetrol since 1986. **Introtek** also offers sensors for air bubbles in tubing, continuous liquid levels in containers, blood component detection, occlusion in tubing, and sensors for drip chambers.

Point Level Detection Sensor (PLD)
